

Science Beyond the Classroom

A one-hour conversation for students who ask questions the syllabus doesn't

1. Introduction

The Nepalese Society of Student Researchers (NSSR) is a student-led organization working to connect, mentor, and grow Nepal's community of student researchers. NSSR is committed to fostering a strong research and learning culture, encouraging academic excellence, and creating opportunities for learning, collaboration, and professional growth among students. This proposal outlines a one-hour “Talk Session: Beyond the Classroom” for Class 10 students at Apex Life School, a conversational session designed to show students that curiosity and learning extend well beyond the syllabus.

2. Background / Motivation

Much of what students learn in school is shaped around exams and a fixed curriculum, leaving little room to explore how learning and inquiry work in the real world. Many students never get the chance to hear directly from young researchers about how curiosity and questions can grow into meaningful pursuits. A short, engaging talk session can open that door, helping students see learning as something alive and relevant rather than only exam material, while connecting them with a wider community of student researchers through NSSR.

3. Objectives

- Help students see how learning, curiosity, and research exist beyond the classroom and textbooks
- Share relatable, real-world examples that connect independent thinking to everyday life
- Create an open conversation around students' own questions and interests
- Introduce students to NSSR as a community they can turn to for further exploration

4. Target Group

Class 10 students of Apex Life School. At this stage, students are close to making decisions about higher education and careers, making it a valuable time to broaden their view of what learning and research can look like beyond the classroom. The session is open to the full Class 10 cohort, with the exact number of participants to be confirmed with the School.

5. Structure / Schedule

S.N.	Durations	Activity/Topic	Details
1	10 minutes	Opening	Welcome, brief introduction of NSSR and the facilitator, overview of the session and a

			framing question to open the session
2	25 minutes	The Talk	Topic: Scientific learning as a basis of research - by Mukunda Niraula. Stories and real example showing curiosity outside the how syllabus turns into research, projects, and unexpected careers
3	15 minutes	Open Conversation	Students ask questions or share their own “beyond classroom” curiosities; facilitator responds live
4	10 minutes	Closing	Key takeaways, and how interested students can stay in touch with NSSR after the session

6. Requested Support

- A classroom or hall with seating for the expected number of participants
- A projector/screen and audio system for the presentation
- Approximately 60–75 minutes in the School's schedule (including a short buffer for discussion)
- Coordination support to inform and gather Class 10 students for the session

7. What You Will Gain

- **Visibility:** Apex Life School's name featured in NSSR's event materials and reports as a partner institution
- **Student Access:** an opportunity to expose Class 10 students to NSSR's programs, mentorship, and future opportunities
- **Impact Reporting:** a short post-session summary the School can use for its own records or reporting
- **Recognition:** a certificate of appreciation and formal acknowledgment of the partnership

8. Expected Outcomes

- Students gain a broader view of what learning and research can look like outside the classroom
- Students leave with at least one new question, idea, or interest to explore
- Students know how to connect with NSSR for further guidance or opportunities

9. Proposed Session Details

Duration: 1 hour (approx. 60–75 minutes including discussion)

Venue: To be coordinated with Apex Life School

Proposed Date and Time:

- Thursday, 30 July, 2026 (Morning Session), or
Friday, 31 July, 2026

(The final date and time will be scheduled based on the school's availability and convenience.)

10. Organizing Body / Team

The session will be organized by the Nepalese Society of Student Researchers (NSSR), Kathmandu, Nepal.

11. Conclusion

This one-hour session offers Class 10 students at Apex Life School a low-resource, high-value opportunity to look beyond the syllabus and reconnect with their own curiosity. We welcome the opportunity to coordinate scheduling and any adjustments to content or format that best suit the School's needs, and look forward to a continued partnership with Apex Life School.

With regards,

Dhirendra Pd. Upadhyay
